ABOUT ME

Computer Engineering graduate from Marmara University with hands-on experience in game development since 2020 and professional experience since 2022. Specialized in Unity-based development for mobile, PC, and cross-platform games. Contributed to both small-scale and large-scale online projects, including systems where we developed custom server infrastructure. Continuously expanding expertise in game architecture, design patterns, performance optimization, and third-party tool integration. Passionate about creating scalable, maintainable, and engaging gameplay systems.

EDUCATION

Marmara University
Computer Engineer
2018 - 2024

LANGUAGES

English - B2

TAYFUR ŞAFAK GENÇAY

Game Developer

EXPERIENCE

MID GAME DEVELOPER

Organica Games | Dec 2024 - Present

- Open World
- Sandbox
- Simulation
- 40.000+ Wishlist
- Over 1,100 Steam Reviews (87% Positive) for Demo
- https://store.steampowered.com/app/3555430/Money_Simulator_Brokeville_Free_Prologue/
- https://store.steampowered.com/app/2994190/Money_Simulator/

JUNIOR GAME DEVELOPER

Jib Games | Jul 2022 - Jan 2023

- Multiplayer Game Development
- Dependency Injection
- Strangeloc
- Addressable
- Cross-Platform Development
- <https://store.steampowered.com/app/1479480/Polity/>

GAME DEVELOPER INTERN

Jib Games | Apr 2022 - Jul 2022

FULL STACK WEB DEVELOPER INTERN

Istanbul Büyükşehir Belediyesi IETT Bilgi İşlem | Jul 2021 - Sep 2021

MSQL, HTML, CSS, ASP.NET, ASP.NET Framework,
ASP.NET Core, Django, MVC structure.,

★ SKILLS

Design Patterns

Abstract Factory, Factory, Decorator, MVC, Strangeloc, Builder, Service Locator, Strategy, Event Bus, Observer, State, Object Pooling, Singleton

Multiplayer

Riptide Networking

Tools & SDKs

Discord SDK (Rich Presence)

📁 PROJECTS

Polity

Worked on this multiplayer sandbox life simulation game during my time at Jib Games. Released on Steam and mobile platforms.

Strattle

Custom-built lobby and multiplayer system was developed using Riptide Networking. The integration with Discord SDK enabled real-time display of lobby data such as player count. The project also featured a simple server-side AI system for added gameplay dynamics

First-Person Shooter

A fully handcrafted first-person shooter developed from scratch no templates or premade assets used. All core systems, including character animations, shooting mechanics, and weapon behavior, were custom-built to ensure full control over gameplay feel and design

Casual & Hyper-Casual Projects

Developed a variety of mobile game projects across multiple genres, continuously expanding my skills and adapting to diverse gameplay mechanics. These experiences allowed me to deepen my understanding of mobile platforms and player engagement through hands-on development.

Money Simulator

1. Shop Systems

Scalable market and coffee shop architectures featuring event-driven lifecycle management, employee AI state machines, cleanliness and decoration systems, inventory and storage handling, financial simulation, dynamic customer behavior, and background simulation systems.

2. Shop Simulation

Automated cashier, stocking, and cleaning workflows powered by state machine-based worker AI, customer satisfaction systems, shelf management, and fully simulated store operations.

📁 PROJECTS

3. Coffee Shop Systems

Advanced barista AI, coffee brewing and recipe validation systems, dessert serving mechanics, dine-in and takeaway customer flows, dual-queue POS systems, tray assembly validation, IK-based interaction systems, and full customer AI state machines.

4. Economy & Finance

Banking systems, credit score simulation, loan and recurring bill management, AutoPay systems, dynamic due-date events, cryptocurrency mining simulation, GPU temperature and power management, and asset confiscation mechanics.

5. Estate & Property Management

Property ownership systems with financial controllers, house simulation systems, saveable customization data, and a scalable ScriptableObject-based estate infrastructure.

6. Product & Logistics

End-to-end supply chain systems including product databases, delivery trucks, supplier ordering systems, barcode scanning, Addressables-based asset loading, warehouse management, and physical delivery workflows.

7. Missions & Jobs

Comprehensive quest framework with task managers, dynamic objective tracking, cutscene triggers, job restriction systems, shift-based employment mechanics, delivery missions, and NPC-driven job systems.

8. NPC & Dialogue Systems

NPC systems powered by NavMesh navigation, FinalIK integration, dynamic look-at behavior, dialogue UI systems, companion AI behaviors, and ambient NPC simulation.

9. UI & Infrastructure

Centralized Panel Manager architecture, gameplay restriction handling, in-game computer and phone systems, mail services, and modular UI workflows.

10. Audio & Ambience

Addressables-based audio management, dynamic ambient transitions, NPC reaction sounds, environmental audio triggers, and automated memory management systems.

11. Vehicle & Simulation Systems

Vehicle damage simulation, depreciation systems, mileage tracking, repair history, dirt and cleaning mechanics, and persistent vehicle state management.

12. Additional Gameplay Systems

Ad agency popularity systems, energy and fainting mechanics, recurring contract systems, lockdown events, technology shops, crypto mining PC systems, and advanced simulation gameplay loops.

Detailed technical information about these projects is available in my portfolio, and additionally, gameplay videos can be found on my YouTube channel.
